In January 2017, Autodesk announced that it will be replacing AutoCAD with BIMx and AutoCAD LT for future development. This will include the retooling of AutoCAD for the next generation of 3D printing. History The company was founded in 1982 by John Walker (former Autodesk founder and CEO) and John Warnock (former Autodesk co-founder and chief architect). Autodesk Inc. and formerly Autodesk, Inc. are separate entities. Development AutoCAD, Autodesk's first application, was launched with the first Macintosh computer (the Macintosh 128K) and many concepts which later made their way into other Autodesk products. Other applications were developed as Autodesk's first strategy was to target engineers, architects and planners. This included (but was not limited to): CADR: a system to plan, design and construct a house CST: an integrated system for the creation, analysis and communication of urban form design DWG: a file format for CAD files DGN: a database file format Maya: a suite of applications for 3D animation, visual effects and digital content creation Creo: a suite of CAD software for industrial design, product development and reverse engineering The growth of the industry and the rise of home computing has changed the way Autodesk design software is used, with a majority of users now using CAD software on computers. To cope with this growth, Autodesk has launched AutoCAD LT, the company's next generation of CAD, as a standalone app for desktops. Features and system requirements The AutoCAD product line includes AutoCAD (for professional use) and AutoCAD LT (for casual use). AutoCAD is a symbol-based application, which means all drawing tools have the shape of the tool as the tool's icon in the application's interface. The user can customize the tool-bar to show only the tools they need. The system requirements for AutoCAD vary, but as of March 2020: Supported platforms AutoCAD was originally only available for Microsoft Windows operating systems, macOS and Linux. In 2013, the Microsoft Windows client was replaced by AutoCAD LT, which runs on Windows, Linux, and macOS. The latest version is 2019, and will include features from Autodesk 3ds Max and Maya. Applications and add-ons AutoCAD R13 includes numerous applications and add-ons. Since the release of AutoCAD 2015, its company-exclusive applications and add-ons are now available for free to students and academic users. Many of these applications are distributed through the AutoCAD Marketplace, an online service which provides applications for Microsoft Office and AutoCAD, as well as related services such as cloud based services and desktop applications. The AutoCAD Marketplace was initially accessible to Windows XP, Vista, and Windows 7 but has since been updated to support Windows 8 and Windows 10. AutoCAD 2013 and later, as well as several of the newer Autodesk applications, including AutoCAD LT and AutoCAD Architecture (formerly AutoCAD Civil 3D), can be run as a Windows service. As of October 2013, this service requires a dedicated CPU core to run the application on Windows 7 and Windows 8. Internet AutoCAD's support of the Internet includes a web-based Autodesk Exchange, a web-based form creation service that lets AutoCAD customers have their drawings, files, or designs automatically filled out with information based on properties of the drawings or files. The web-based form creation service, which was available in AutoCAD 2009, 2010, and 2011, is replaced with the Dynamic User Input feature in AutoCAD 2012. In AutoCAD 2013, 2009, and 2011, a web-based CAD information service named CADX (CAD Exchange) was added. In AutoCAD 2013, this service allows users to make changes to drawings or files online. A new collaboration feature called Dimension Tab was added in AutoCAD 2013, based on Microsoft SharePoint Server 2007. This feature allows users to track information and make changes to dimensions and drawings from any web browser. AutoCAD Exchange was first introduced in AutoCAD LT 2009. In AutoCAD 2013, 2010, and 2011, the Internet also provides users with the ability to use a web browser to access the Autodesk Exchange to obtain forms, schedules, and other types of information. AutoCAD also offers an Internet-based form generation service called Autodesk Software Ideas. This service allows AutoCAD customers to generate printable forms in the customer's preferred format. The format of the form depends on the number and size of the columns and rows that need to be generated. The number of columns and rows that need to be generated can be a1d647c40b
