Open a new project, or open an existing one. Choose the correct version, be it Architecture or Civil 3D. Click on Save. Click on "Generate Keys". What does the keygen do? The keygen creates the files that you will need to activate your installation. The files can be found in the directory where the installation is. On a Windows computer the files are in the directory C:\Program Files\Autodesk\AutoCAD 2015\User\Ribbon\keygen*. If you are using Linux, find the folder where your Autodesk package was installed. The files are *.key and *.uuid. The *.key file contains the client key, and the *.uuid file contains a unique code for your installation. When you activate the Autodesk package, Autodesk expects to find these two files. If the keygen files are missing, Autodesk will prompt you to install the correct version of Autocad. On a Mac, the keygen files are found in the directory /Applications/Autodesk/AutoCAD 2015/User/Ribbon/keygen.
